FOOD CONSUMPTION AVERAGES BY REGION:

TOTAL FLOUR CONSUMED AND FOODS PRODUCTS CONTAINING THE FLOURS

Type of flour and products	Kampala			S	outh-West	North			
.,,,	Median	Mean	(SD)	Median	Mean (SD)	Median	Mean (SD)		
Total wheat flour equivalent	n=198				n=24	n=12			
consumption*	58.3	63.6 (4	3.3)	35.3	52.5 (40.0)	35.6	41.9 (26.9)		
Total maize flour equivalent	n=134				n=61	n=55			
consumption*	116 125 (87.4)		78.6	84.9 (48.7)	147	178 (129)			
Total rice consumption	n=102				n=26	n=6			
rotarrice consumption	90.2 115 (80.7)		116	132 (108)	121	120 (19.5)			
Total maize grain consumption	n=86				n=110	n=143			
rotar maize grain consumption	106 126 (91.7)		1.7)	201 289 (262)		191	237 (164)		
Total sorghum consumption	n=2				n=7	n=182			
rotal sorghum consumption	17.4 17.4 (18.4)		10.8 20.9 (16.1)		165	202 (161)			
Total millet consumption	n=0				n=2	n=l			
rotar miller consumption				16.09	16.09 (16.29)	59.13	59.13 (0.00)		

CONSEQUENCES OF HIGH RATES OF MALNUTRITION IN UGANDA

 Malnutrition significantly reduces agricultural productivity.

- The agriculture sector, lost more than US\$34 million worth of productivity in 2009 due to iron-deficiency & anaemia in the adult population.
- Other losses to agriculture occurred as a result of time lost due to illnesses associated with other types of malnutrition.

CONSEQUENCES OF HIGH RATES OF MALNUTRITION IN UGANDA

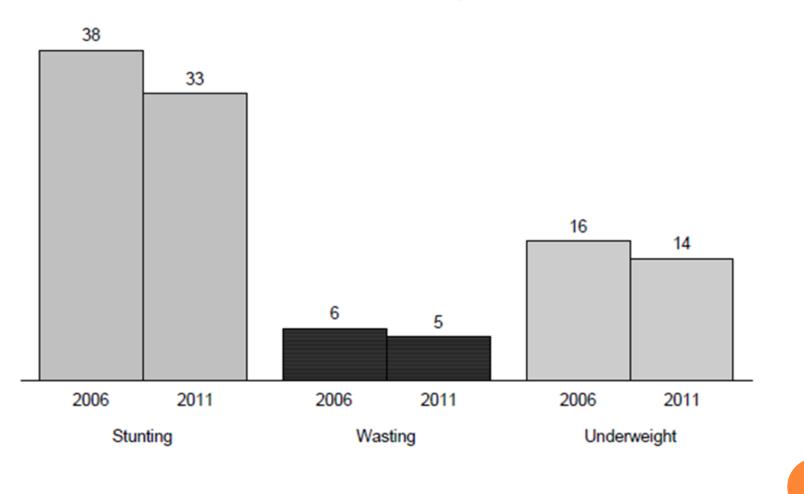

Malnutrition kills

- More than 16,000 children who were born weighing less than 2.5 kg (Low birth weight) died in 2009.
- Other forms of malnutrition were associated with more than 67,500 child deaths in 2009.

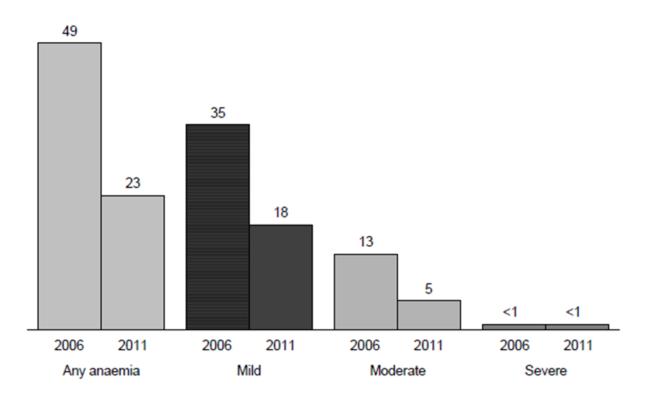

Cycle of micronutrient deficiency consequences

Figure 11.2 Trends in nutritional status of children under 5 years

low weight-for-height (wasting), low height-for-age (stunting) low weight for age (underweight) Source: UDHS 2011

Figure 11.8 Trends in anaemia status among women age 15-49 years

OVERVIEW ON NATIONAL FOOD INTERVENTION PROGRAMMES

- Universal Vitamin A supplementation
- Fe/Folic acid supplementation
- Food fortification
- Food/diet diversification
- Nutrition education
- Behaviour change communication
- Bio fortification (trials done for vitamin A in sweet potatoes and cassava, iron in beans)

PERFORMANCE OF THE PROGRAMMES: FORTIFICATION

- o 1994: The Universal Salt Iodization programme
- 2000: Expanded to include commonly consumed foods
- o 2004: Launch of voluntary fortification
- o 2011: Legislation passed for mandatory fortification
- 2013:Enforcement of mandatory regulations

Compliance:

8 of 10 wheat millers are fortifying, 3 of 5 maize millers are fortifying, 5 of 5 oil producers are fortifying

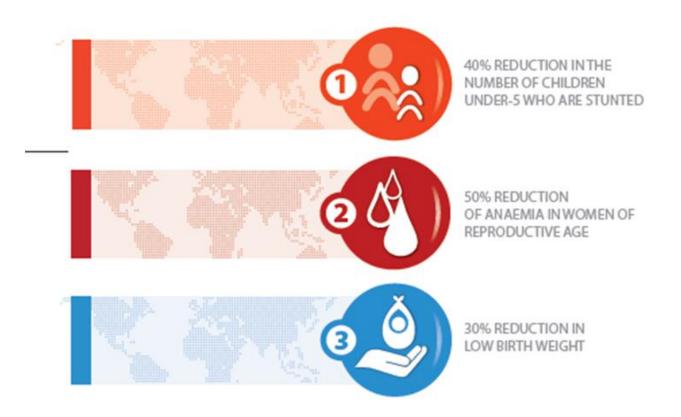

OVERVIEW ON NATIONAL FOOD INTERVENTION PROGRAMMES

Fortified Food/Micronutrient	Addition at Factory [§] (mg/100 g)	Estimated Losses (%) [¶]	Level in Household (mg/100 g)		
Vegetable Oil					
Vitamin A	3.5	30	2.5		
Sugar					
Vitamin A	1.0	30	0.7		
Wheat Flour					
Vitamin A	0.3	20	0.24		
Vitamin B-I	1.3	30	0.91		
Vitamin B-2	0.7	15	0.60		
Niacin	9.0	15	7.7		
VitaminB-6	0.7	15	0.6		
Folic Acid*	0.3	15	0.43		
Vitamin B-12	0.0015	15	0.0013		
Iron (as ferrous fumarate)	4.0	0	4.0		
Zinc	5.0	0	5.0		
Maize Flour					
Vitamin A	0.1	20	0.08		
Vitamin B-I	0.5	30	0.35		
Vitamin B-2	0.4	15	0.34		
Niacin	4.0	15	3.4		
VitaminB-6	0.0	0	0.0		
Folic Acid*	0.1	15	0.14		
Vitamin B-12	0.0005	15	0.0004		
Iron (as NaFeEDTA)**	1.5	0	3.0		
Zinc	4.0	0	4.0		

KEY NUTRITION OUTCOME INDICATORS

Indicators	Baseline* (%) UDHS 2006/FAO 2008	UDHS 2011 (%)	UNAP target 2016 (%)
Iron-deficiency	73	49	50
anemia: prevalence in			
under-5s			
Iron-deficiency	43	23	30
anemia: prevalence in			
women 15–49 years			
old			
Vitamin A deficiency:	19	38	13
prevalence in under-5s			
Vitamin A deficiency:	20	36	12
prevalence in women			
15–49 years old			

SUPPORTIVE POLICIES IN PLACE

- The National Health Policy
- The Health Sector Strategic Plan (HSSP)
- o The Food and Nutrition Policy
- The Uganda Nutrition Action Plan (UNAP)
- Food fortification communication strategy

FOLLOW-UP OR GOAL

- Design, set up and implement a sustainable M&E system for food fortification
- Assign responsibilities
- Address challenges to fortification

CHALLENGES & CONSTRAINTS

Challenges

- Weak market surveillance
- Limited capacity of both regulatory bodies and producers
- Inconsistency in the labeling of fortified foods
- Inadequate monitoring of premix at importation
- There is still lack of consumer awareness on benefits of fortified foods
- Poor purchasing power because of poverty
- Poor enforcement of regulations and standards

Constraints

- Maize flour still voluntary as many millers do not make up 20MT/Day.
- Variation in food consumption patterns regarding intake of fortified foods
- Large number of small scale millers

Thank you
